

Virtual Relaxation Solutions

BACKGROUNDER

Relaxation has become a life necessity rather than a luxury. Whether you're a high-powered executive, working 9 to 5 or a stay-at-home mom-- everyone has stress in their life. The key is to know when to re-charge and get your mind and body in sync.

For those who want to refresh themselves quickly and naturally, Virtual Relaxation Solutions (VRS), a division of TLC Industries, Inc. has created the world's first sensory enrichment environment combining zero-gravity motion, video, audio, vibro-massage and scent all rolled into one experience.

By combining technology and traditional meditation tools to induce a relaxation response, Virtual Relaxation helps soothe the mind and body by bringing together motion, sound, scent and sight components that can send you "virtually" to your favorite destination -- without even leaving your seat.

With Virtual Relaxation, you can quickly customize your relaxation experience and in just 20 minutes emerge from the session balanced and energized.

Here's How Virtual Relaxation Works:

When you enter the private relaxation room, you will choose from hundreds of beautiful and tranquil videos from the digital library. From Hawaii to the Himalayas you can enjoy waterfalls, sunrises, oceans, deserts and rain forests displayed on a unique floating "Starglass," flat-panel television.

Next you will select your own music such as instrumental pieces to quiet the mind, soothe the soul and reduce stress.

Once you've selected your audio and visuals, you will lay back in the Motion Lounge™ where your body is suspended in "memory foam" and literally drifts through space in a unique three-dimensional orbital motion. The Motion Lounge recreates the perfect ocean wave and gently repeats it. After about ten minutes as your brain starts to acclimate to the motion, and your body forms its own unique "thermo-print" in the foam, you start to experience a sense of weightlessness as you deeply relax.

Lastly, you will choose your own relaxing scent to fill the room. The scent machine is a computer-controlled device that uses compressed air to project different scents on cue for a predetermined time and distance and will release on time to digital media. Favorite scents include: ocean breeze, rain forest, garden of roses and even fresh baked cookies.

Virtual Relaxation Solutions offers a state-of-the-art sensory enrichment environment that allows individuals to experience the "relaxation response" in a safe, simple and pleasurable way and can be installed and customized for homes, businesses, spas and hotels.

About Virtual Relaxation Solutions

Virtual Relaxation Solutions, a division of TLC Industries, is the world's first sensory enrichment environment combining motion, sight, sound and scent to help people relax and feel energized in just 20 minutes. By combining technology and traditional meditation tools to induce relaxation and reduce stress, Virtual Relaxation Solutions helps soothe mind and body and can be customized for homes, businesses, spas and hotels. About TLC Industries

For the past 22 years, TLC Industries has been the premier game cabinet maker to the arcade industry. With a team of more than 100 skilled designers, engineers, technicians and craftsman at its 45,000 square foot corporate headquarters in Schaumburg, Illinois, TLC had designed and produced more than one million cabinets for the best-selling video games, pinball machines and novelty amusement equipment for clients such as Incredible Technologies, Sega, Midway, Namco and Konami.

As arcades have evolved into a home experience, TLC has re-invented the company and introduced a new division call Virtual Relaxation Solutions. By reversing the adrenaline pumping sensory overload arcade experience, VRS has combined technology and traditional meditation tools to create the world's first sensory enrichment environment - joining motion, sight, sound and scent into one integrated experience to help people relax and feel rejuvenated in just 20 minutes.
